

# Computer Vision for the Built Environment

David Greschler  
CEO, Nomad Go

# About Nomad Go

## Founded in 2016

50 Years of Experience in Computer Vision

100+ deployments

Partner Sales Focus

## Industry-Leading Computer Vision Solution

Easy to Deploy

Lightweight Infrastructure with Scale &

Privacy

Trained on 20M+ Real-World Images

## Venture-Backed

# What is the Built Environment?

The built environment touches all aspects of our lives, encompassing the buildings we live in, the distribution systems that provide us with water and electricity, and the roads, bridges, and transportation systems we use to get from place to place.

It can generally be described as the **man-made or modified structures** that provide people with living, working, and recreational spaces.

# Buildings are the #1 Global Polluter

Buildings are one of the five Grand Challenges identified by the Bill Gates Climate Change Initiative

**Grand Challenges**

- ELECTRICITY**  
How can we deliver reliable, affordable zero-carbon electricity to the world?
- TRANSPORTATION**  
How can we get around our communities and the world without emitting carbon?
- MANUFACTURING**  
How can we make everything we use without emitting greenhouse gases?
- BUILDINGS**  
How can we eliminate emissions from our homes, offices, hospitals, and schools?
- AGRICULTURE**  
How can we feed the planet without contributing to climate change?

Breakthrough Energy [breakthroughenergy.org](http://breakthroughenergy.org)

**“Buildings account for 40% of energy use in the United States and 36% globally.”**

*Dean Allen*

*CEO, McKinstry*

## What are people doing inside buildings?

**Back to the Office:**  
Building Operations  
Efficiency (Health,  
Cleaning)

**Visual Intelligence:**  
How & When Spaces  
Are Used

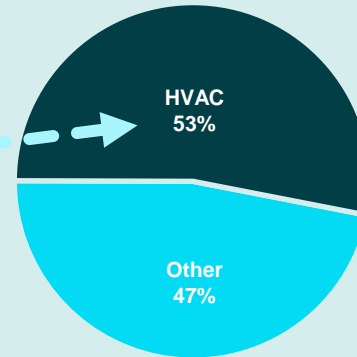

**Efficiency & Sustainability:**  
Reducing Energy Costs  
and Carbon Emissions  
(HVAC)

# The Lack of Building Occupancy Data is Wasting the World's Energy and Over 100M Tons of CO2 Emissions a Year

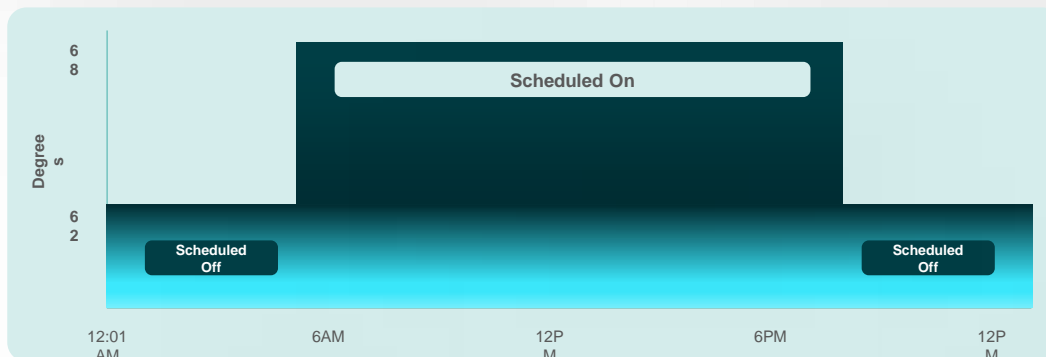

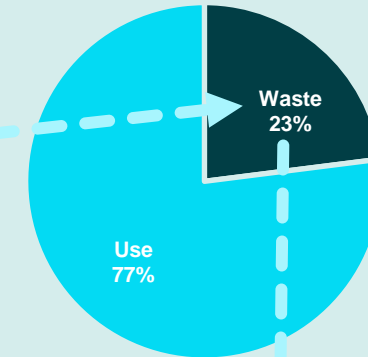

▶ Building operations generate 39% of global GHG emissions

▶ Over 50% of this comes from HVAC

▶ Up to 23% HVAC is wasted without occupancy data – DOE\*

Most buildings heat, cool & ventilate with schedules, *regardless if anyone is occupying the spaces!*

# Current Solutions are Outdated & Ineffective

Motion Detectors

Binary. Only tells if someone is there – **not how many.**

Not real-time (15-30 mins lag)  
& needs calibration every 6 months

CO2 Sensors

Beacons

Only count the **number of devices**, not the number of people

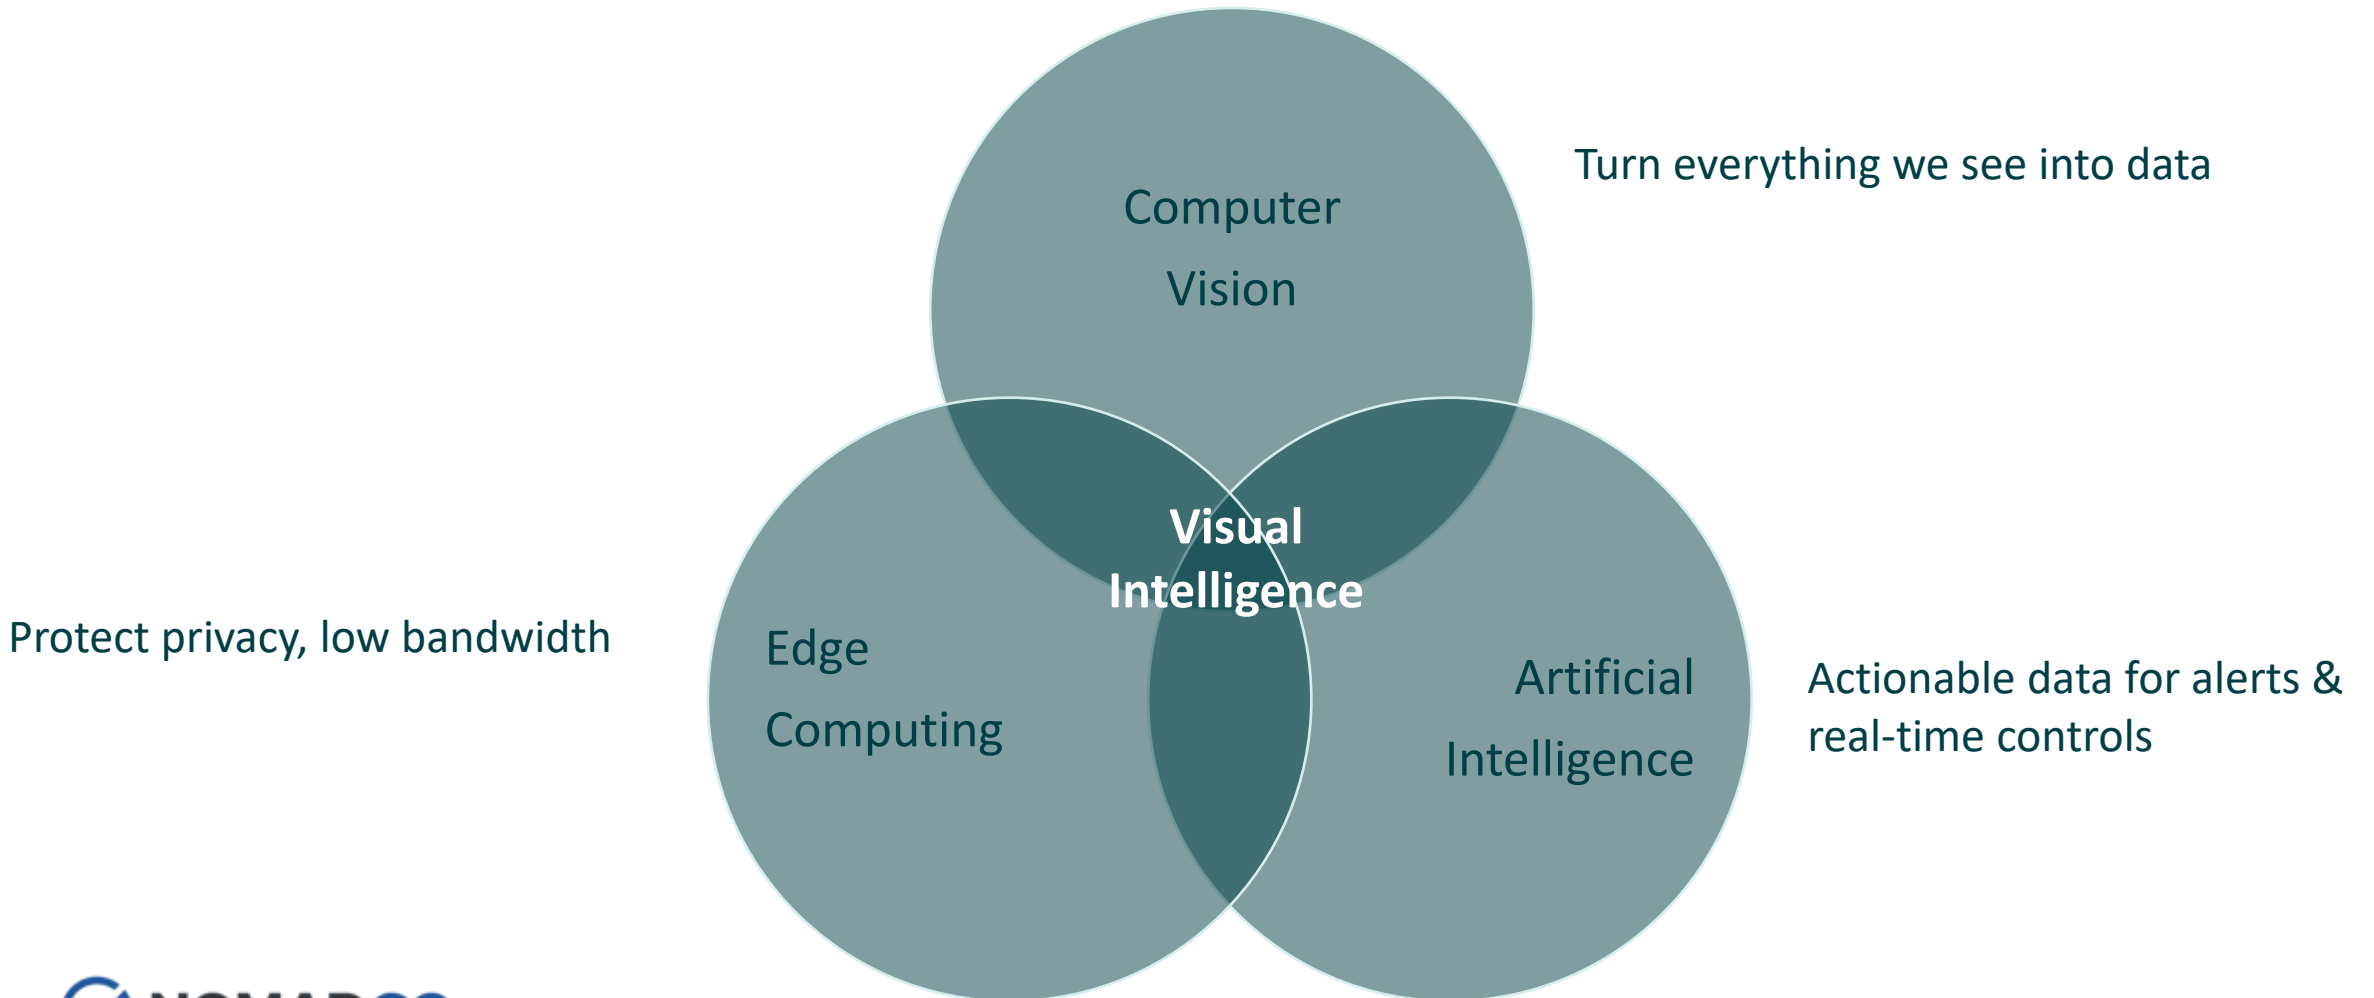

Only count **entries and exits** with accumulated errors

People Counters

# Solving these Challenges with Computer Vision

Accurate • Real-time • Privacy • Extensible

# Why Smartphones and Tablets?

## World's Best Sensor

Powerful camera, built-in security and networking, highly durable, flexible and extensible

## Edge Processing

Keep data local, secure, and real-time with on-device processing that protects privacy. Ability to update new models over the air.

## Cost-Effective

Half the CapEx cost of comparable (processing power, camera quality, networking alternatives, security) security cameras and AI sensors

# Edge AI Computer Vision: Occupancy-based HVAC: Real-time and Highly Accurate

AI finds 8 people in space

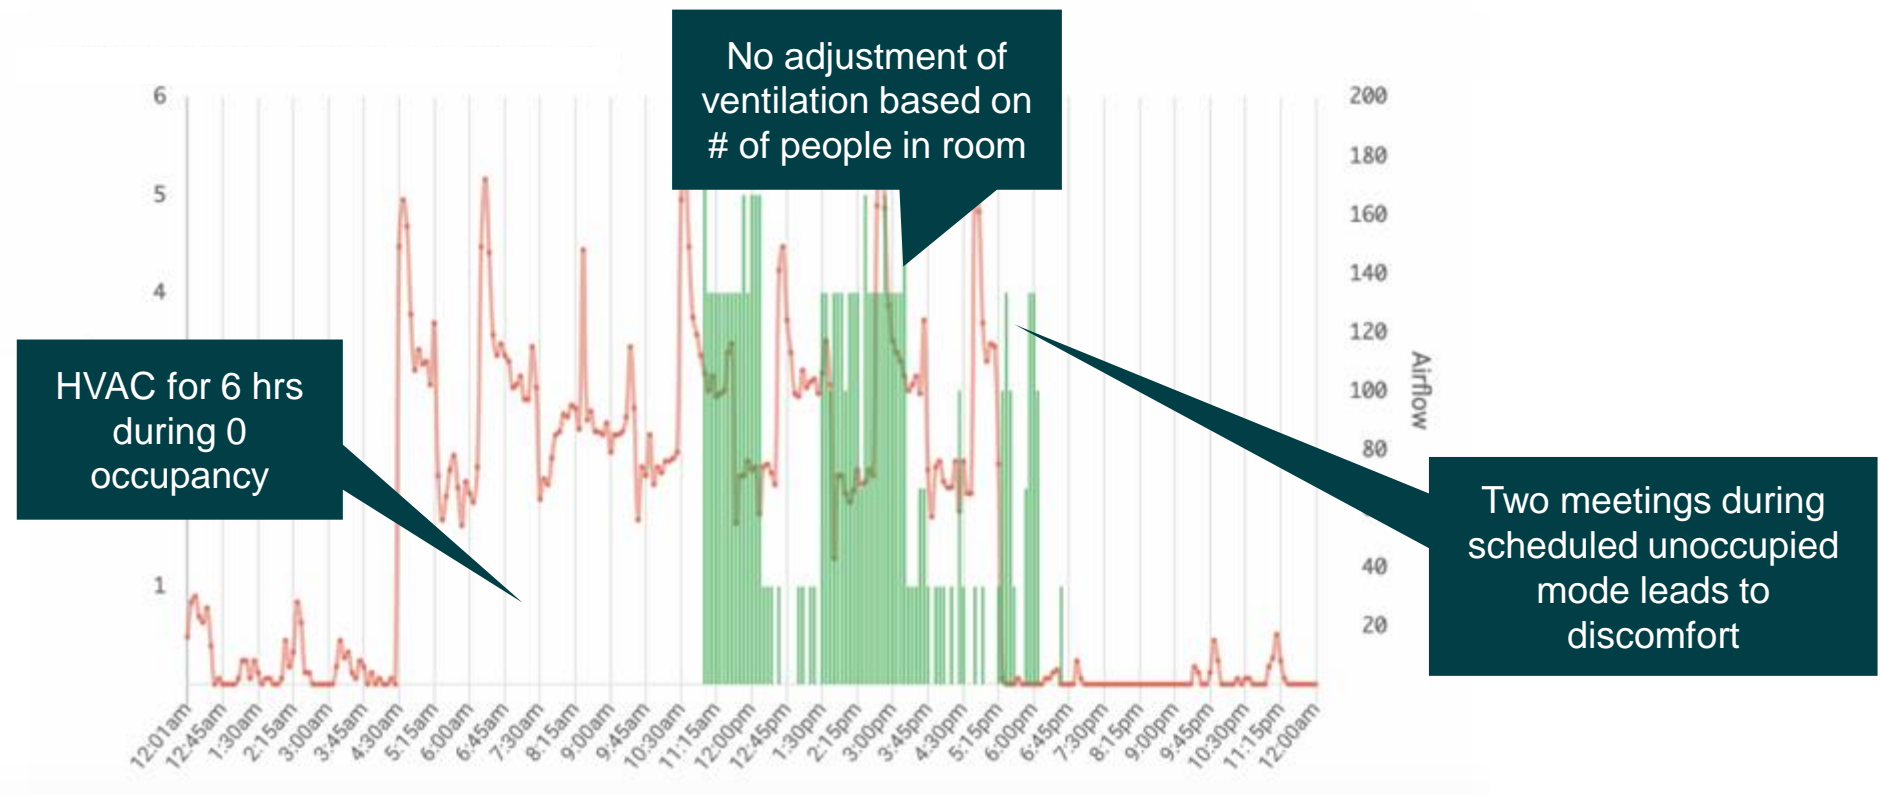

Building automation system uses AI  
data for precise HVAC controls

# Why Live Occupancy Matters

## Buildings Can't Predict When a Space is Used

Utilization Last 24 Hours

# Scheduled vs. Actual Occupancy

Scheduled Occupied Mode

Actual Average Occupancy

Scheduled  
Occupied Mode  
(92%)  
(12am to 10 pm)

## Potential Costs Savings for 7 Common Areas

- \$52,000/year Estimated annual HVAC spend (based on electric/gas bills)
- \$18,480/year Potential OpEx savings (35%)
- \$370K Improvement on net asset value

## Greenhouse Gas Emissions Reduction

Tons of CO2/YR with Scheduled 92%  
scheduled HVAC

Tons of CO2/YR with Occupancy-based  
HVAC

# Visual Intelligence Solutions

## Energy & Sustainability

Usage-based building controls

## Health and Safety

COVID reopening & compliance

## Space Utilization

Know how any space is used

# How it All Comes Together

Smart devices & smart cameras collect and process computer vision on the edge

AI processing of data for real-time out-of-the-box metrics

- Occupancy/Density/Traffic
- Dwell Time
- Mask Compliance
- Distancing Compliance
- Demographics
- Survey

Real-time data feeds

Dashboard Reporting

App/Alerts

API Access/HVAC Controls

# Visual Intelligence for the Built Environment

## See Anything

Gain immediate visibility into facility activity

## Measure Anything

Use AI to automatically measure and track

## Impact Everything

From smarter building controls to safer spaces,  
Visual Intelligence becomes your data backbone

Thank You
